

PLEASE NOTE

Due to current environmental regulations, we do not put a durable coating on our painted exhaust systems. The coating used is a rust inhibitor and will burn off soon after the exhaust gets hot. We suggest that before installation, you clean off the coating with a good solvent (i.e. lacquer thinner or acetone) and paint the system with a "high temp" paint, available at most auto parts stores.

Assemblers Tip

To ease assembly when fit is tight, sand the inside of a slip joint or collector with Type A very fine Scotch-Brite or sand paper and use a small amount of anti-seize on the pipe to fit together.
