

IMPORTANT NOTICE

Please clean your fuel tank before use. A failure to clean your new fuel tank before installation may destroy your carburetor and result in a “non-smooth running engine”.

Important instructions before replacing your fuel tank:

1. Our fuel tanks are manufactured strictly according to original standard and contains a rust protection spray on the inside of the fuel tank. This sprayed-on liner must be removed prior to your fuel tank installation in your vehicle.
2. Please use a carburetor cleaner to clean the inside of your fuel tank.
3. Clean out and repeat 2-3 times by using gasoline as the last step in your cleaning process. Make sure by visible inspection that your fuel tank is empty and clean.

After this process you will fully enjoy our product.

Best regards

Paruzzi Quality department
