

# Model years for the Karmann Ghia

Classic Volkswagen models have evolved over the years, with most changes being made on fixed dates. Starting with the 1960 calendar year, the model year precedes the calendar year: a car built in October 1964 is a 1965 model (the model change took place on August 1, 1964).

Vehicle registration documents indicate the year of first registration, which is not the exact year of manufacture. A car purchased in January 1973 may have been in the showroom for eight months, so it was built around May 1972. If you order parts, it is important to know the period of manufacture of your car so that you do not order parts that are not suitable for your classic VW.

**Please note:** our list of chassis numbers, also known as vehicle identification numbers (VIN), assumes that your car still has all its original technical specifications. This list is provided as an additional service and does not give rise to any rights.

Select the list that corresponds to your Volkswagen model, then look for the chassis number, which can be found on the registration documents. If these are not available, the chassis number is stamped on the chassis under the rear seat.

# Engine codes for the Karmann Ghia

It is important to know which engine is installed when you want to order parts for that engine. Not every 1200 Karmann Ghia has a 1200 cc engine. A lot of engines are interchangeable, often without modifications to the chassis or bodywork, so the odds are high that you have a different engine in the back of your car. Either a bigger displacement engine or an engine from another year.

If at one point the engine was replaced by a rebuilt engine, the letter combination can be different (if it has an engine number at all). Please ask the supplier for the exact year of manufacture and displacement, as they tend to use their own letter/digit combinations.

From the engine number you can determine what type of engine it is and the displacement of the engine.

The first letter(s) determine the displacement and the type of engine. The following numbers indicate the built year.

Engines up through 31.7.1965 did not have letters included in the engine number, for those engines we can only supply you the built year.
